Sector Exposure by Source of Revenue[#]

Geographical Exposure by Source of Revenue[#]

Performance Chart growth of AUD \$10,000[^]

[^] Calculations are based on exit price with distributions reinvested, after ongoing fees and expenses but excluding individual tax, member fees and entry fees (if applicable). Fund Inception 1 July 2013. Returns denoted in AUD.

^{**} 3-year returns are calculated and rolled monthly in AUD, with the outperformance consistency indicating the percentage of positive excess returns since inception.

[#] Sectors are internally defined. Geographical exposure is calculated on a look through basis based on underlying revenue exposure of individual companies held within the portfolio. Cash exposure includes profit/loss on currency hedging. Exposures may not sum to 100% due to rounding.

⁺ MSCI World Net Total Return Index (A\$ hedged)

^{**} Risk measures are calculated after fees. An adverse market is defined as a negative three-month return rolled monthly for the MSCI World NTR Index (A\$ Hedged). Down market capture shows if a fund has outperformed a benchmark during periods of market weakness, and if so, by how much.

Portfolio Commentary

In August, the portfolio exited its position in Tencent Holdings.

Tencent owns numerous structurally advantaged businesses. However, we believe Tencent is operating in socially contentious areas including gaming, entertainment and social media that carry the risk of further, and potentially severe, regulatory intervention by the Chinese government. Given recent events we do not believe we can judge with any degree of certainty where the Chinese government's regulatory intervention will land and we cannot reasonably assess the impact on Tencent's future profitability. Given the potentially wide range of outcomes on the value of Tencent, we have sold the investment.

The portfolio has maintained a position in Alibaba Group. Though we recognise that Alibaba's regulatory risks have risen we do not consider that Alibaba's core businesses in ecommerce and cloud computing operate in socially contentious areas. We consider that regulatory actions taken by China's government – countering anti-competitive behaviour, improving data privacy and promoting platform interoperability – as being related to legitimate public policy and have been implemented in an even-handed manner so therefore not disadvantaging Alibaba versus its competitors. Importantly, Alibaba's share price contains a wide margin of safety to our assessed valuation, which incorporates further material costs for contributions to the government's common prosperity agenda and likely increased taxation, providing an attractive risk-reward equation.
